

TEMPERATURE CONTROL VALVES

AMOT CONTROLS offers an extensive range of self-actuated and external sensing thermostatic valves. These can be applied for specific diverting or mixing applications. In addition, Amot offer a range of 2 and 3 way pressure control valves for general industrial applications.

SENSORS

AMOT offers a complete range of pressure and temperature sensors for industrial, marine and hazardous area applications. Heavy duty switches and electrical transmitters are particularly at home in heavy vibration environments.

SAFETY AND SEQUENCING CONTROLS

AMOT's wide choice of mechanical safety controls, valves and indicators are used for monitoring the operations of engines, compressors and other marine or industrial power equipment and processes. They can be applied in complex sequencing systems or simple lube oil pressure-powered systems to shut down the equipment before damage occurs.
